

# DESIGNING FOR INFECTION CONTROL IN HOSPITALITY

## The Material Difference

Material selection plays a large role in infection control and disease prevention. Durable materials that are easy to clean and inhibit bacterial growth contribute to healthy and sustainable environments.

### COVID-19 Disinfection Protocols / Material Selection

- Easy to clean and disinfect
- Corrosion resistant
- Durable construction

### Multi-attribute Approach

- Service Life
- Environmental Considerations
- Health and Safety

The right materials can mean the difference between healthy spaces and premature product failures, unbudgeted costs, and negative health outcomes. View the Quick Reference Guide at [bit.ly/VVRefGuide](https://bit.ly/VVRefGuide).

## Cleaning vs Sanitizing vs Disinfecting: Know the Difference

**Cleaning** removes dust and other microorganisms – accomplished with water, detergents, and mechanical action and is an essential first step before disinfection.

**Sanitizing** is a form of germ control that reduces bacteria but not SARS-CoV-2 and other viruses.

**Disinfecting** inactivates SARS-CoV-2 and other pathogens. It often involves chemicals, heat, or UV. Consult the EPA recommended list of disinfectants at [bit.ly/VVEPADisinfectants](https://bit.ly/VVEPADisinfectants).

## Team Effort

Essential coordination and education are required for:

C-Suite / Owners

Property Management

Facility Staff  
(including housekeeping,  
guest services)

Guests

## Design Implications

Impacts on public health affect future design considerations in the time of COVID-19 and beyond.

### What to Do Now

- Identify high-touch surfaces and items.
- Reduce person-to-person contact.
- Set effective cleaning protocols.
- Configure spaces for social distancing considering contactless room service and signage reminding guests about masks and social distancing.

### Planning for the Future

- Design spaces with social distancing in mind.
- Evaluate all materials and surfaces for their ability to handle cleaning and disinfecting protocols.
- Consider selecting nonporous materials for all high-touch surfaces for durability and to reduce the spread of infection.

## Smart Design Means Easy-to-Clean Materials

Nonporous materials reduce opportunities to trap pathogens.

### Flooring

Waterproof vinyl sheet, tile, and planks

### Seating

Cleanable vinyl coated fabrics

### Wallcovering

Resilient vinyl wall products

## Design Considerations — From Operations to Materials

Nonporous materials reduce Operational-based design includes:

Social distancing

Safety checks

Social zones / shared spaces

Material selection options for spaces requiring regular disinfection include: elastomeric or vinyl-coated furniture and thermally fused tabletops. A Flow Chart on Design Implications based on Operational Implications can be viewed online at [bit.ly/VVHospitality1](https://bit.ly/VVHospitality1).
